

LANDSYSTEMS NURSERY
"DOG DAYS OF SUMMER"

Hot weather is on the horizon! Be ready to tackle a new set of gardening challenges!

INCREASE YOUR TOMATO

YIELD...Landsystems has several products to increase a tomato plant's fruit production. Fertilome TOMATO & PEPPER SET is a ready-to-use natural plant hormone product that provides Biological Grow Power to promote blossom set and fruit development. This product may also be used on beans, cucumbers, eggplants, melons, okra, strawberries, and grapes to increase fruit production.

YIELD BOOSTER is a natural plant hormone that helps stop and prevent blossom end rot caused by calcium deficiency and promote larger, firmer fruit.

GARDEN SEEDS **50% off** while supplies last.

KEEP THEM BLOOMIN' Fertilize your pots and baskets weekly with **Fertilome Rooting & Blooming** for continuous blooming.

LIVEN UP YOUR DREARY WINTER LANDSCAPE with **WINTER BERRIES** These deciduous shrubs are a type of holly. In the spring and summer they add a splash of deep green to your garden, but in the winter months their intense red berries

put on a spectacular show. Deer-resistant and sun tolerant, they make a great addition to your garden. Be aware that you need a male and female plant for berry production.

BERRY HEAVY- Large bright orange-red berries are stunning in the winter. Leaves drop early resulting in a better fruit display. 6-8ft. tall and wide. Use Mr. Poppins as the pollinator.

MR. POPPINS-This winter berry is smaller than some, only 3-4ft. tall and wide. Use as a pollinator for Berry Heavy.

ADD THAT TOUCH OF GREEN ***SLOWMOUND MUGO PINE***

This true dwarf mugo offers year-round beauty with dense dark green needles and a consistent rounded form. Ideal for foundation plantings, rock gardens, and borders. 3-4ft. tall and 5-6ft. wide. Easy to grow, reliable, and very hardy.

Other varieties of Mugo Pines available.

DON'T LOOSE THAT GREEN... Time to fertilize your lawn. We recommend **Landsystems Summer Blend** (20-8-12-5) with 50 % slow-release nitrogen. Organic gardeners should apply another application of **Cascade Natural** (8-3-5). LET'S KEEP IT GREEN!

CAN YOU GROW ***FRUIT IN CENTRAL*** ***OREGON ??***

Well you can at
Landsystems Nursery!!
Our fruit trees are over-

loaded with cherries, apples, and peaches. We have a good selection of fruit trees that do well in this area. They are all semi-dwarf and will only grow to 12-15' tall and wide making them perfect for a small home orchard.

Cherry: **Lapins** produce dark red fruit late in the season.
Montmorency is an excellent

tart pie cherry.

Stella cherries produce large delicious black fruit.

Apple: **Haralred** produces dark, pink-red fruit with a sweet, tart flavor.

Honeycrisp apples are fluorescent red with a crunchy sweet, tart flavor.

Red & Yellow Delicious are all time favorites.

Peach: **Reliance** peaches are excellent for colder areas. (Temporarily out of stock.)

Pear: **Summercrisp** should be harvested while still green to keep that sweet, crisp flavor.

Bartlett produces large golden yellow fruit that is good for eating fresh or canning.

Plum: **Toka** plums are medium sized with rich flavor beautiful color.

Prune: **Italian** prunes produce medium-sized purple fruit.

Some varieties will need a pollinator. Check with one of our staff members for information.

WATER..WATER..WATER

With the hot weather coming, you may have to evaluate your watering system. Here is a guide on how much water you should be applying each week:

LAWNS: Spring 1-1 1/2 inches
Summer 2-3 inches

SHRUBS: Spring 1 inch

TREES: Summer 2 inches
Spring 2 inches
Summer 3 inches

**IT'S NOT TOO HOT TO PLANT...JUST WATER..WATER..WATER..!!
DON'T FORGET THE ROOT STIMULATOR TO GET THINGS STARTED!!**

COOL..GREEN..OASIS

Enjoy the look and feel of green grass for the rest of the summer. We have fresh McPheter's turf weekly. Call to order yours! 541-382-7646

LESS WATERING..MORE MULCH!

Mulch saves water and the Landsystems bark blower saves time and energy. Call
