### "LEAF" ME ALONE!! PLANTS FOR PRIVACY

A commonly asked question at the nursery is "What can I plant for privacy?" Here are some ideas you may not have thought of. Many deciduous shrubs can be used for privacy because of their thick branching and size:

**FLAME WILLOW:** This tightly branched shrub can grow 15 feet tall and wide. Its bark turns orange to red during

the winter for visual interest.

**SIBERIAN PEASHRUB:** Small bright yellow pea-shaped flowers in the spring are followed by small bright green foliage. Grows 8-10 feet tall and 6-8 feet wide. Densely branched and deer-resistant.

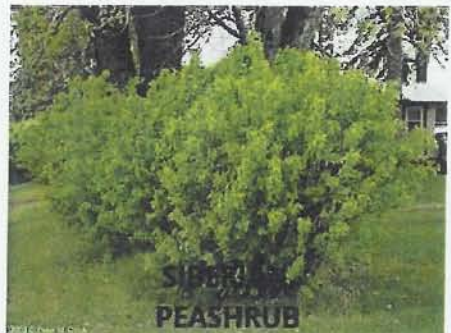

**CHEYENNE PRIVIT:** Densely branched shrub grows 4 feet tall and 4-6 feet wide. Lush green foliage with white flowers followed by small black berries.

**RED TWIG DOGWOOD:** Creamy white flowers in the spring are followed by white clusters of berries. Brilliant red bark provides winter interest. Grows 6-8 feet tall and 6 feet wide. Yellow twig and Variegated dogwood are also good choices.

**CANADIAN RED CHOKECHERRY:** This very hardy shrub grows 12-15 feet tall and 8-10 feet wide. Wine colored foliage and white flowers in the spring followed by berries and red fall color.

We recommend Moonglow Juniper for evergreen screens.

**MOONGLOW JUNIPER:** Blue-green in color, hardy, pest and deer resistant. Grows 10-15 feet tall and 6-8 wide.

# GARDEN SEEDS 50% OFF

Excludes wild flower seeds.

GUARDIAN SPECIES:

## BENEFICIAL NEMATODES

FIELD PHOTOS:

FIELD NOTES:

- ▶ Fast, effective control of over 230 soil-dwelling insects
- ▶ Pro-active soil preparation! They protect your trees, shrubs, fruits, vegetables and turf before insect pests emerge.
- ▶ They attack pest eggs and larvae (like grubs) without harming earthworms or microbial activity in the soil.
- ▶ Non-Toxic - Safe for use around children, pets and edible gardens.

*Nematodes search out susceptible pests and eat or injure them.*

*Once inside, they introduce a bacteria that normally kills the pest post in 24-48 hours.*

*With the help of beneficial nematodes we can reduce the populations of plant pests before they have a chance to emerge from the soil. They're an environmentally safe way to protect your plants without the use of pesticides.*

GUARDIAN SPECIES:

## LADY BUGS

FIELD PHOTOS:

FIELD NOTES:

- ▶ Lady Bugs add happiness and luck to your garden...and a bit of color too!
- ▶ A Lady Bug's favorite food is aphids: they eat about 50 per day.
- ▶ Lady Bugs should be released in the evening to adjust to their new home.
- ▶ Lady Bugs are an important part of a well-balanced garden.

*See sucking aphids feed on plant's sap.*

*This is what the Lady Bug looks like. Don't be afraid! They're also beneficial predators.*

**Organic CONTROL**

*It's no wonder lady bugs are a favorite of people all over the world. They're so cute and helpful at the same time!*

GUARDIAN SPECIES:

## GREEN LACEWINGS

FIELD PHOTOS:

FIELD NOTES:

- ▶ Green Lacewings are the BEST all-purpose insect for your garden.
- ▶ Their larvae look like little alligators that are called "Aphid Lions" because they can eat up to 1,000 aphids per day!
- ▶ They also devour Spider Mites, Scale, Thrips, Leafhoppers, Whitefly, Beetle Larva and more!

*The larvae have paddle shaped jaws (mandibles) that they use to pierce prey and suck out body juices.*

**Organic CONTROL**

*They lay eggs on tiny threads suspended from your plant's leaves.*

## ORGANIC WEED CONTROL

When a new product bursts on the scene, it's normal to wonder about product safety and effectiveness; coupled with all the news, controversy and debated health effects...that choice only becomes more difficult. How do you know if you're making the best choice for your family, your yard and the world around you?

We want you to have all the information possible to help you make your buying decision easy and informed. The active ingredients in PULVERIZE products are listed here:

- **PULVERIZE Weed Killer for lawns: Iron HEDTA (FeHEDTA)**
- **PULVERIZE Weed & Grass Killer: Ammoniated Soap of Fatty Acids**
- **Pulverize Weed, Brush & Vine Killer: Ammoniated Soap of Fatty Acids and Maleic Hydrazide**

• **Iron HEDTA (FeHEDTA)** - Derived from iron (Fe) - the most common element on Earth, by mass - this ingredient is actually a plant nutrient that greens your lawn.

• **Ammoniated Soap of Fatty Acids** - work by stripping the surface coating on leaf surfaces, causing desiccation or dehydration.

• **Maleic Hydrazide** - prevents regrowth and according to EPA R.E.D FACTS, it is "practically non-toxic" and frequently used to prevent sprouting of potatoes and onions.

## TIME TO FERTILIZE YOUR LAWN WITH LANDSYSTEMS SUMMER BLEND.

This fertilizer contains 50% slow-release nitrogen to last throughout the season. To go

Protect yourself from the blazing sun of summer with a garden hat. Our "Sloggers" carry a rating of 50+ for protection against UVA and UVB rays.

## FEED YOUR SOIL

**ADD SOME ZIP TO ALL YOUR PLANTING BEDS !!**

Gardener & Bloome Soil Building Compost is a nutrient-rich, all-natural organic compost containing forest humus, chicken manure, bat guano, worm castings, kelp meal, and gypsum. Cover the soil surface 1-3 inches deep around your plants and trees. Mulching with this product helps reduce watering needs and helps prevent weeds while adding valuable nutrients.

## NIGHT INVADERS

When you see insect damage such as holes or bite marks, but no insects, your plants may be the victims of night feeding insects such as earwigs or weevils. Because they live underground, regular insecticides may not be effective. We have the answer. **Hi-Yield Vegetable & Ornamental Insect Control Granules** can be applied around the infected area or plant and will effectively kill the insects as they emerge. A totally organic control of these insects is **Diatomaceous Earth**. We carry the food grade product that is totally natural oyster shells and OMRI certified.
